AMENDMENTS TO CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

- 1-28 (canceled)
- 29. (new) A system for facilitating three-dimensional movement of a suspended object comprising:

an object having a set of associated line support elements;

- an X line coupled to a plurality of sides of said object and configured to move via said set of associated line support elements;
- an X junction configured to relocate said X line to effectuate X movement of said object;
- a Y line coupled to a plurality of sides of said object and configured to move via said set of associated line support elements;
- a Y junction configured to relocate said Y line to effectuate Y movement of said object; and,
- a Z movement device configured to displace said X line and said Y line to effectuate Z movement of said object.
- 30. (new) The system of claim 29 wherein said X line and said Y line are two line sides of a line.
- 31. (new) The system of claim 29 wherein said set of line support elements allow said X line and said Y line to pass through said set of line support elements and comprise components

which control movement of said X line and said Y line.

- 32. (new) The system of claim 29 further comprising:
- said X junction comprising an X movement motor having an X movement device coupled with said X line;

said Y junction comprising a Y movement motor having a Y movement device coupled with said Y line; and,

- a Z movement motor coupled with said Z movement device.
- 33. (new) The system of claim 32 further comprising an electrical generator and electronic drive units coupled to said X movement motor and said Y movement motor and said Z movement motor.
- 34. (new) The system of claim 29 further comprising an isolator associated with said object.
- 35. (new) The system of claim 34 wherein said isolator comprises passive stabilization.
- 36. (new) The system of claim 34 wherein said isolator comprises active stabilization.
- 37. (new) The system of claim 34 wherein said isolator comprises active stabilization in at least one first axis and passive stabilization in at least one second axis.

- 38. (new) The system of claim 34 where said isolator is configured to support a vertical camera assembly supported at approximately the center of gravity of said vertical camera assembly.
- 39. (new) The system of claim 34 wherein said isolator is configured to support a camera assembly away from the center of gravity of said camera assembly.
- 40. (new) The system of claim 29 wherein said object is coupled with a mechanical claw.
- 41. (new) The system of claim 29 wherein said object is coupled with a hoist or loader.
- 42. (new) The system of claim 29 wherein said object is coupled with a mining scoop.
- 43. (new) The system of claim 29 wherein said object further comprises a downward pointing camera for remotely viewing from the position of said object.
- 44. (new) The system of claim 29 wherein said object comprises at least one person.
- 45. (new) The system of claim 29 further comprising at least three supports.
- 46. (new) The system of claim 29 wherein said object comprises an element having positive buoyancy.

47. (new) A method for facilitating three-dimensional movement of a suspended object comprising:

relocating an X line associated with a platform to effectuate X-movement of said platform; relocating a Y line associated with said platform to effectuate Y-movement of said platform; and, displacing said X line and Y line to effectuate Z-movement of said platform.

- 48. (new) The method of claim 47 wherein said X line and said Y line are two line sides of a line.
- 49. (new) The method of claim 47 further comprising: isolating an object coupled to said platform from line movement.
- 50. (new) The method of claim 47 further comprising: stabilizing an object passively coupled to said platform from line movement.
- 51. (new) The method of claim 47 further comprising: stabilizing an object actively coupled to said platform from line movement.
- 52. (new) The method of claim 47 further comprising: obtaining pictures from a photographic device coupled to said platform.
- 53. (new) A system for facilitating three-dimensional movement of a suspended object comprising:

means for relocating an X line associated with a platform to effectuate X-movement of said platform;

means for relocating a Y line associated with said platform to effectuate Y-movement of said platform; and,

means for displacing said X line and Y line to effectuate Z-movement of said platform.

- 54. (new) The system of claim 53 wherein said X line and said Y line are two line sides of a single line.
- 55. (new) The system of claim 53 further comprising:
 means for isolating an object coupled to said platform from line movement.
- 56. (new) The system of claim 53 further comprising:

 means for stabilizing an object passively coupled to said platform from line movement.
- 57. (new) The system of claim 53 further comprising:
 means for stabilizing an object actively coupled to said platform from line movement.
- 58. (new) The system of claim 53 further comprising:
 means for obtaining pictures from a photographic device coupled to said platform.
